## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Tateishi (U.S. Patent # 5,912,552).

Tateishi discloses claimed invention a DC-DC converter (figure 1-5 and 7-8), including a semiconductor switch device (figure 5, item Q1 and Q2), a means for a first feedback and a second feedback (figure 5, item first and second feedback signal), a control mode, a pulse width modulation control and a pulse frequency modulation (column 5, line 20-55).

## Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/613,017 Page 3

Art Unit: 2838

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 3-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kanouda et al. (U.S. Patent # 6,489,756) in combination with Katayama (U.S. Patent # 6,469,483).

Kanouda et al. discloses claimed invention a dc-dc converter (figure 4), including voltage regulating switching device (figure 4, item 8a and 8b), an amplifying means (figure 4, item 73), a pulse width modulation and triangular wave signal (figure 4, item 93 and 91), a selection means (figure 4, item 12a and 12b), an amplifying means (figure 4, item 7). Kanouda et al. does not disclose the utilization of the technique for an analog amplifier circuit. Katayama teaches the utilization of the similar technique for an analog amplifier (figure 1). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Kanouda et al.'s DC-DC converter circuit by utilizing the technique taught by Katayama for the purpose of increasing efficiency of the converter.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rajnikant B. Patel whose telephone number is 571-272-2082. The examiner can normally be reached on 6.30-5.00; m-f.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Sherry can be reached on 571-272-2084. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/613,017
